

In Ear Monitor System

OVERVIEW

Whether you're playing in a live performance or rehearsing, you need to hear yourself to be your best. Yet some performers still struggle with booming floor wedge monitors and loud stage volume. The Peavey In Ear Monitor is a personal monitoring breakthrough. You can only sound better if you hear yourself better. Wireless monitoring is taken to the next level of perfection with the Peavey In Ear Monitor system. New pass-through sockets for the audio signal enable the audio feed from a console to be routed to other devices in the chain, simplifying setup. The system features selectable output settings of 10mW and 100mW. The enhanced audio frequency response of 50 to 15,000 Hz means the sound the performers hear is the most realistic and life-like a wireless monitor system can offer. The Peavey In Ear Monitor system is composed of a Stereo Mini Bodypack Receiver, a Stereo Transmitter, and ear buds. The system has 100 preset selectable frequencies.

FEATURES

- 100 selectable channel options
- Standard ear buds included
- Optional rack mount kits are available for one or two transmitters side-by-side
- Weight Unpacked: 4.41 lb(2 kg)
- Weight Packed: 4.41 lb(2 kg)
- Width Packed: 11.75"(29.845 cm)
- Height Packed: 18"(45.72 cm)
- Depth Packed: 2.75"(6.985 cm)
